## SUMMARY

---

I am a passionate Laravel Web Developer with a strong background in building scalable, API-driven web applications. My expertise lies in RESTful APIs, authentication mechanisms, and third-party integrations, along with solid experience in relational and NoSQL databases, query optimization, and production deployments.

Beyond Laravel, I am proficient in React.js, CodeIgniter, and Laravel Livewire, and I continuously expand my skills to stay aligned with modern web technologies. I am also confident in managing version control with Git/GitHub and deploying applications using cPanel and Hostinger.

I enjoy solving complex problems, writing clean and maintainable code, and collaborating with teams to deliver high-quality applications.

## SKILLS

---

- **Backend:** PHP, Laravel, CodeIgniter, Livewire
- **Databases:** MySQL, PostgreSQL, MongoDB, Supabase
- **Frontend:** React.js, Tailwind CSS, Bootstrap
- **Integrations:** Payment gateways, Third-party APIs (Stripe, EmailJS, Telegram, Slack, etc.)
- **Deployment:** cPanel, Hostinger
- **Other:** RESTful API development, Authentication, Admin panel development
- **Tools:** Postman, Cursor, GitHub, GitHub Desktop, FileZilla, ChatGPT, Claude AI, MySQL Workbench

## EXPERIENCE

---

- **Webtwine Technology, Ahmedabad** *Laravel & React Developer*  
*March 2025 – Present*

At Webtwine Technology, I focus on building scalable and maintainable web applications using Laravel for the back-end and React.js for the front-end. My work involves designing clean database structures, writing optimized queries, and ensuring smooth API communication.

I actively contribute to creating interactive dashboards, reusable React components, and implementing secure authentication mechanisms. I also integrate third-party services and optimize performance for production environments.

Beyond development, I collaborate with the team through Git workflows, handle code reviews, and participate in deployment cycles, ensuring stability and quality of applications.

- **Fablead Developers Technolabs, Surat** *Laravel Web Developer*  
*Mar 2024 – March 2025*

At Fablead Developers Technolabs, I worked on service-based projects involving Laravel and CodeIgniter with MySQL. I was engaged in requirement analysis, project planning, and backend development with a strong focus on clean architecture.

My responsibilities included creating secure RESTful APIs, integrating payment gateways, and implementing role-based authentication systems using JWT and Laravel's built-in features. I also ensured scalability and followed best practices like MVC and SOLID principles.

I collaborated closely with frontend developers, performed API testing, and optimized database queries for better performance in production environments.

## PROJECTS

---

### Webtwine Technology

- **Shopify Admin Integration**

Developed a custom admin panel integrated with the SoftwareDiscountUSA Shopify store using Shopify APIs. Implemented order management and license key assignment functionalities to streamline back-end operations and automate key delivery. Added Slack API for internal notifications and integrated Telegram for real-time updates.

- **InboxAssist - Ticketing System**

Built a ticketing system that connects directly with Gmail using the Google Gmail API. Automatically fetches and organizes customer support emails into tickets, supports reply handling, status updates, and role-based access. Integrated real-time notifications using Pusher for instant updates to agents and users.

- **MailMentor – Marketing Software**

A robust email marketing solution built using Laravel. Features user segmentation, a Unlayer drag-and-drop email template editor, and advanced campaign scheduling. Handles thousands of users efficiently using Laravel queues and background jobs for reliable campaign delivery and performance tracking.

### Fablead Developers Technolabs

- **Localwala - Multi Vendor E-Commerce Solution**

Implemented subscription functionality for premium features. Integrated Stripe Payment Gateway for seamless subscription payments. Worked on other critical platform services, focusing on performance and scalability. Collaborated with the team to troubleshoot and optimize the platform.

- **Project Management App**

A Laravel-based task and project tracking system. Implemented role-based access with Admin, Manager, Staff, and App User roles. Enabled project assignment workflows, task delegation, and real-time project tracking. Developed client portal, resource management, and meeting management features.

- **xPets - Social Media Platform for Pet Owners**

Developed a back-end system using Laravel to build RESTful APIs. Designed MySQL databases to store user data, posts, reels, and chats. Integrated APIs for user connections, messaging, and real-time interactions. Ensured optimal performance and security.

- **Ugecy - Campaign and Content Creator Platform**

Platform for campaign creators and content creators to collaborate. Developed campaign management and content submission functionalities. Implemented user roles and permissions, integrated Stripe payments, and improved user workflows for smooth campaign creation, content submission, and payment processing.

EDUCATION
